

ACCESSORIES

Contactless Activation Panels for Accessible Toilets and Nursing Room

STI HandiWave

An elegant and hygienic reinterpretation of the conventional door activation panel for accessible toilets and nursing rooms

Minimalist Design

The STI HandiWave's design is aesthetic yet functional. When locked, the "OCCUPIED" sign lights up on the exterior to convey that the room is currently in use and the "LOCKED" sign lights up on the interior to indicate that the room is secured.

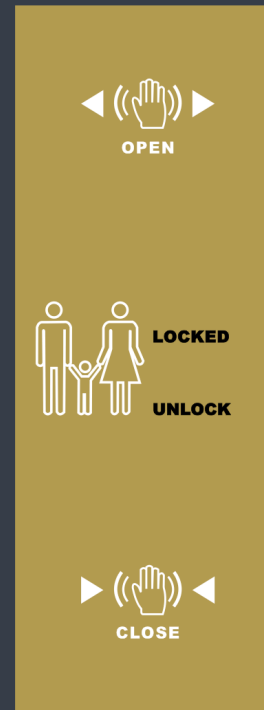

Hygienic Solution

The STI HandiWave features contactless activation which allow the user to open and lock the door just by waving near the panel. This eliminates potential contact points between users.
